• One year **Sumangol Sen Memorial Scholarship** 2010 from Govt. College of Arts & Craft, Agartala.

Project #1

Client Name:

State Street Corporation

Location : Offshore | Kolkata
Duration: November 2019 - July 2020
Domain: Banking & Finance

Project Title :

Arial Cockpit Automation Delivery Lifecycle

Scope/Activities

Strategy Design
Human centric design
User Interface design

Tools / Technology

Sketch
Quip

Challenges

Mapping the priorities from the parent Cascade along with its sub applications and integrating them into the mobile application.

Objectives

Arial Cockpit Automation Delivery Lifecycle is persona based internal as well external database and information architecture that leverage capital investment of assets globally. It's robotic automation process to maintain of group activities and put all information into practice with coordination of artificial intelligence. Throughout the process involve user scenarios, user journey and site-map.

Responsibilities

- The goal was increase exposure within the industry & set bench mark itself as an industry leader.
- Publish persona based wireframe of the application and for initial feedback in the early stage.
- Develop frontend deliverables of automation idea forms create approve & submit by Camunda.
- All deliverable assets stored & deployed in one of the configurable management systems.
- As per sprint planner deliver all assigned mock screens for within committed scheduled of time.
- Also re-work on design refinement iteration based on the internal and external reviews.
- To go extra mile Involve as supporting role during post development to achieve time on delivery.

Deliverables

- High fidelity screens (supporting dark & light mode) along with specification sheet for the ease of development.
- Extended support on Cascade Desktop revamping along with MyApple, an internalportal activity automation.

Project #2

Client Name:

Saudi Aramco

Location :   Onsite | Al Khobar
Duration: October 2018 - May 2019
Domain: Oil & Natural Energy

Project Title :

Safety and Incident Reporting Dashboard

Scope/Activities

Strategy Design

Human centric design

User Interface design

Tools / Technology

Sketch

Quip

Challenges

Mapping the priorities from the parent Cascade along with its sub applications and integrating them into the mobile application.

Objectives

The provided solution minifies the large number of accidental incidents in the plant location. It has the accessibility for oil field workers to contribute possible incident and accidents to be notified to the safety department. Which is much more convenient for monitoring authority to maintain field workforce as well as financial damage point view.

Responsibilities

- Research on documented feedback and filed interviews reports to evaluate exact requirement.
- Attended workline outbreaks and breakdown occurrence workshop to pin-point user pain area.
- Collaborate with functional personals, developers to ensure smooth human centric functionality.
- Represented all enterprise-level data oriented info-graph according as per demand and supply.
- Shared high fidelity prototypes to enhance existing SAP-EHS module with minimal defects.
- Test synchronization of SAP UI-5 development for iphone and android ecosystem usability.
- The project validated the value of empathize that I look forward to applying the same approach.

Deliverables

- High fidelity screens (supporting dark & light mode) along with specification sheet for the ease of development.
- Extended support on Cascade Desktop revamping along with MyApple, an internalportal activity automation.
